

Says

What have we heard them say?
What can we imagine them saying?

Our brains are wired to enjoy things which make us happy

A few bites of sweet every day will decrease the threat of brain stroke

Thinks

What are their wants, needs, hopes, and dreams?
What other thoughts might influence their behavior?

Many people think there're sweets addicts consuming real sugar and artificial sweeteners in various forms

Most sweet tasting foods contain sugar

Keerthi Limited...

Sweets are not the healthiest preparation of carbohydrates but definitely, the food items increase the nutrients level.

Sweet foods are commonly used as rewards for desirable behaviour, specifically among children.

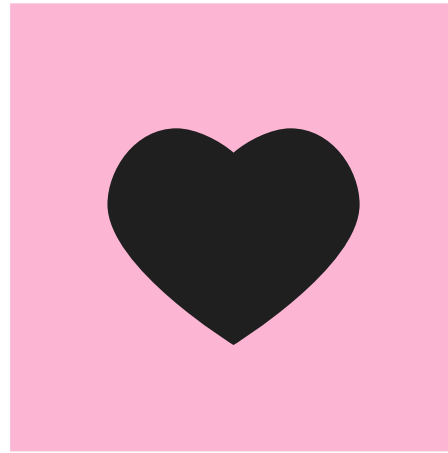

45 to 78 years of age, when they consume a little bit of sweet every day, reduce the risk of almost 17% changes of brain stroke.

Sweet is associated with sweetness, and sometimes it refers to a forbidden pleasure.
